## Wesley Medical Research

Established in 1994, Wesley Medical Research is Queensland's second oldest medical research organisation.

#### **WHO WE ARE**

Founded by UnitingCare, the research activity undertaken by Wesley Medical Research specifically aims to span all UnitingCare hospitals including The Wesley Hospital, St Andrew's War Memorial Hospital, Buderim Private Hospital at the Sunshine Coast, and St Stephen's Hospital at Hervey Bay.

Wesley Medical Research houses a world-class biobank which sources, stores and supplies tissue, blood and data for collaboration with Australian and international biomedical researchers.

In addition to our hospital remit, Wesley Medical Research is focused on improving health in rural and remote communities such as the Bowen Basin. From the beginning, Wesley Medical Research has encouraged and supported research initiated by people who really know the value of clinical research - practising doctors, nurses and allied health professionals in our hospitals. They are driven by a desire to give patients better treatment options and improved quality of life for a range of contemporary diseases and health issues.

#### **OUR MISSION**

Immediate improvements in patient care and quality of life through applied medical research.

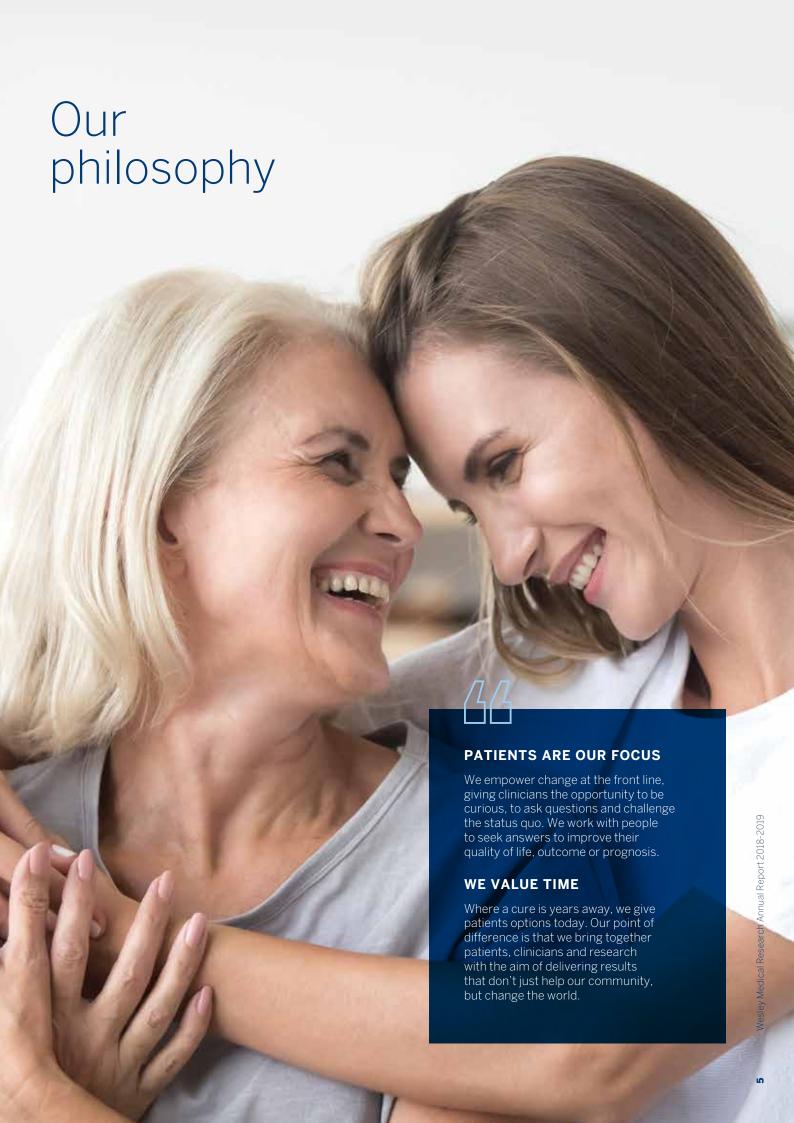

#### **OUR VISION**

A world leader in applied medical research acknowledged for achieving excellence and innovation in patient care. Wesley Medical Research fosters a strong research culture in UnitingCare Health hospitals, improving patient outcomes by linking medical research and clinical practice.

They are driven by a desire to give patients better treatment options and improved quality of life.

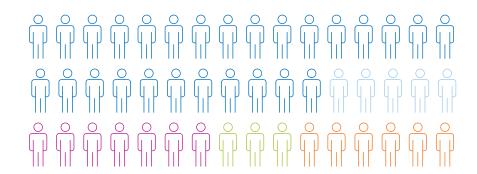

# Highlights for 2018-2019

781
PATIENTS

PARTICIPATED IN RESEARCH ACROSS THESE PRIORITY AREAS

Neuroscience

15,338
SAMPLES ADDED TO OUR BIOBANK

Biobank samples contribute to large international projects, including research aiming to:

- Develop a new early diagnostic test for prostate cancer using a urine sample.
- Investigate proteins in the blood that are associated with endometriosis, paving the way for the development of a quick and easy diagnostic test.
- Increase biological knowledge of the autism spectrum and co-occurring conditions to transform the lives of autistic people across the lifespan.

# Making a difference

Access to life-changing treatment conducted at our clinical trials centre

I finally found people who truly care about my condition and the challenges we face.

Wendy, Coeliac Disease

A Phase 2 clinical trial for a novel coeliac disease vaccine (Nexvax2®) in which Wesley Medical Research enrolled the highest number of participants globally.

I finally have joy back in my life. The future is bright for me and my family.

Kym, Porphyria

A Phase 3 clinical trial testing a novel gene silencing agent to treat rare, genetic diseases characterised by potentially life-threatening attacks.

Wesley Medical Research saved my life.

Wayne, Pompe Disease

A Phase 3 clinical trial investigating a new generation enzyme replacement therapy for treatment of a progressive, debilitating and often fatal neuromuscular disease called Pompe disease.

HIGH IMPACT PUBLICATIONS IN 1

2

### internationallyrecognised

peer-reviewed journals authored by researchers across our four UnitingCare hospitals. Outlined are three key projects. Results from the largest ever study of septic shock, led by Professor Bala Venkatesh | The Wesley Hospital

A research project involving 3800 patients investigated the role of steroids in treating septic shock – a potentially fatal infection. The results of this research have changed international clinical practice by demonstrating that steroids reduce the duration of septic shock and decrease the length of a patient's hospitalisation, but do not lead to fewer deaths. Venkatesh et al. Adjunctive Glucocorticoid Therapy in Patients with Septic Shock. New England Journal of Medicine, 2018.

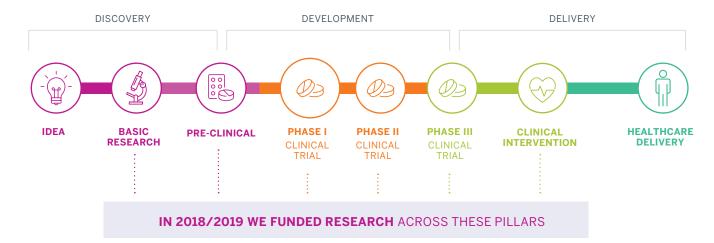

Optimising use of deep brain stimulation in patients with Parkinson's disease, led by Dr Philip Mosely | St Andrew's War Memorial Hospital

While deep brain stimulation (DBS) is an established treatment for Parkinson's disease that can reduce motor symptoms and improve quality of life, it has been associated with the development of distressing neuropsychiatric side effects. This research provided evidence that the location of the electrodes used to administer DBS plays an important role in determining whether patients will develop neuropsychiatric symptoms. This has the potential to significantly improve safety and tolerability of DBS for patients with Parkinson's disease. Mosely et al. The Site of Stimulation Moderates Neuropsychiatric Symptoms After Subthalamic Deep Brain Stimulation for Parkinson's Disease. NeuroImage: Clinical, 2018.

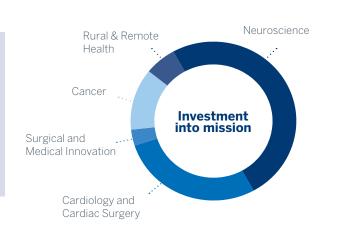

Targeting genetic changes to treat multiple sclerosis, conducted by Professor Judith Greer and Professor Pamela McCombe | St Andrew's War Memorial Hospital

Results from this novel research project showed that a specific genetic change in patients with progressive multiple sclerosis affected how they responded to a treatment agent. These results may play a role in the design of new clinical trials, and help clinicians decide on treatment options for patients with multiple sclerosis. Yan... McCombe, Greer. Increased Constitutive Activation Of NF- B p65 (ReIA) in Peripheral Blood Cells of Patients with Progressive Multiple Sclerosis. Journal of Neuroimmunology, 2018.

TOTAL INVESTMENT INTO MISSION

# Chairman's report

It is my great pleasure to report on the activities of Wesley Medical Research. Our research continues to serve patients across the four UnitingCare hospitals and has collected a long list of significant achievements over its 24-year history.

In July 2019, Associate Professor John Allan stepped down from the Chief Research Advisor role, a position he has held with great distinction for the past 2 years. He brought invaluable skills, experience and leadership to Wesley Medical Research. He has steered the institute through a period of change and leaves an outstanding legacy.

I would like to take this opportunity to thank two other members of our board whose terms have recently come to an end: Ms Deborah O'Toole and Mr Richard Lizzio. Along with Associate Professor John Allan, they have made a great contribution to Wesley Medical Research. We have welcomed three new members: Ms Mairi McNeil, Dr John Rivers and Mr Michael Kreig. I would like to acknowledge and thank my fellow board members, members of research committees and dedicated volunteers who give generously of their time and expertise.

Wesley Medical Research has continued to grow in 2018-2019, with the number of participants involved in our research increasing from 428 to 781. I would like to acknowledge the patients who have participated in our research. By taking part in our work you have contributed to advancing scientific knowledge and, in some cases, improving health outcomes for yourself and others. Without your involvement, our research would not be possible.

We want to improve patient outcomes, but this is only possible with the continued support of our donors. I would like to thank our tremendously generous philanthropists, donors, corporate sponsors and community fundraisers. We are grateful for donations of all sizes and thankful for the many people who have chosen to contribute.

I would like to acknowledge our biggest philanthropic donors, Lyn and Bobbie Brazil AO and John and Wendy Thorsen. I would also like to highlight the important and continued support from: Invitro Technology, Vidyajey Foundation, Albrecht Foundation, Mitsubishi Development and The Justin Cameron Cancer Care Foundation.

I am excited by the future direction of the organisation and confident it will continue to accelerate discoveries that translate into improvements in patient care and quality of life.

ster Allen

Our fierce pursuit of robust research will continue to break new ground. We want to improve patient outcomes, but this is only possible with the continued support of our donors.

Peter Allen Chairman Peter Allen Chairman

# Chief Research Advisor's report

Each year our researchers continue to push the frontiers of medicine; improving the quality of life for patients and contributing to knowledge globally. This year, we have produced some exceptional results.

Wesley Medical Research was acknowledged as the global leader in recruitment for NexVax2, a coeliac disease vaccine trial. Led by Dr James Daveson and supported by Dr Jennifer Schafer, this significant achievement would not have been possible without their dedication and passion for these patients. Coeliac disease will continue to be a focus for Wesley Medical Research as we try to understand and improve outcomes for these patients.

Professor of Intensive Care Medicine at the University of Queensland and Deputy Director of Intensive Care Medicine at The Wesley Hospital, Professor Bala Vanatesh, worked with our team on a world-wide study focused on adjunctive corticosteroid treatment in critically ill patients with septic shock. Published in the New England Journal of Medicine, his findings were considered one of the top ten most influential findings in 2018 and have modified clinical practice in Australia, as well as in both developed and developing countries around the world.

74/4

It has been a great pleasure and privilege to lead this research institute. I am confident the next chapter will be an exciting one for Wesley Medical Research.

Associate Professor John Allan Chief Research Advisor

Neuropsychiatrist Dr Phil Mosley launched an Australian-first study of medicinal cannabis for the treatment of Tourette's Syndrome. This neurodevelopmental disorder is characterised by multiple involuntary movements and vocalisation tics. There is no cure for Tourette's and no medication that works universally for all individuals without significant adverse effects. As you will read in this annual report, Chris Wright is the first patient to complete the trial and has seen exceptional results. It is hoped this promising research will provide patients with life-changing options (pg 10).

This is my final Chief Research Advisor's report, with my appointment ending in July 2019. I joined the Wesley Medical Research board in 2009 and since that time, I have seen our research help thousands of patients, change clinical

practice and contribute to medical advancement in our UnitingCare hospitals and across the globe.

It has been my very great pleasure and privilege to lead this research institution. I am confident the next chapter will be an exciting one for Wesley Medical Research.

Associate Professor John Allan

Lohn Alla

# Our impact on Tourette's Syndrome

Hope for better quality of life for Tourette's patients.

After trying a dozen different medications, Chris, a Brisbane man who was diagnosed with debilitating Tourette's Syndrome at age 12, is part of an Australian-first medicinal cannabis trial.

For the past 16 years, the condition has impacted all aspects of Chris' life, including his mental health. This trial has offered Chris more than hope. It's offered a future.

Chris Wright was the first participant to commence treatment on a medicinal cannabis clinical trial to treat his neurological disorder Tourette's Syndrome - a disorder that often has its onset in childhood and is characterised by involuntary movements and vocalisations.

Chris developed Tourette's Syndrome in childhood and despite medication, his condition has persisted. His physical tics include rolling of the eyes and spasms in his shoulders and neck. This has meant that even simple tasks like reading a paperback book has been out of reach.

"The purpose of this clinical trial is to investigate whether medicinal cannabis is a potential therapy for people with Tourette's Syndrome," said Wesley Medical Research lead investigator and neuropsychiatrist Dr Philip Mosley.

At 31, Chris is working full-time in Customer Service in Brisbane and spends his day trying to regulate his tics. "The reprieve I've experiences has been very welcome. I've seen a real change in my life," said Chris.

The medicinal cannabis, developed to pharmaceutical standards, contains a mixture of cannabidiol (CBD) and tetrahydrocannabinol (THC) — two phytocannabinoids derived from the cannabis plant. The trial is being conducted by Wesley Medical Research in Brisbane, with the support of the Lambert Initiative at the University of Sydney. The Lambert Initiative is supplying the drug for this trial.

"Given the public interest in the therapeutic use of cannabis, it is important to conduct rigorous and methodologically-sound research," said Dr Mosley.

Participants in the clinical trial at Wesley Medical Research will complete two 6-week periods of treatment with active drug or placebo. To eliminate bias, neither the participant, nor the investigator will know which treatment participants are receiving until the trial is complete.

"Tourette's has really been a blow to my confidence... my life in general. I'm often in pain and so I often spend my days sleeping and recovering just to do it all again...," said Chris.

"The biggest impact this trial has had on my life so far is that my head movements have almost gone and I have been able to read my first book in 10 years. I don't know if anyone realises what a big deal this is for me. This is life-changing."

Senior Research Manager Dr Jennifer Schafer said that "Our focus is to give people like Chris these opportunities to improve their quality of life. We offer hope and answers through medical research.

"We are fortunate to have dedicated front-line clinicians like Dr Mosley leading this important work and donors who continue to support this valuable research."

Australian-first medicinal cannabis trial

Two 6-week periods of treatment

Evidence to support successful treatment

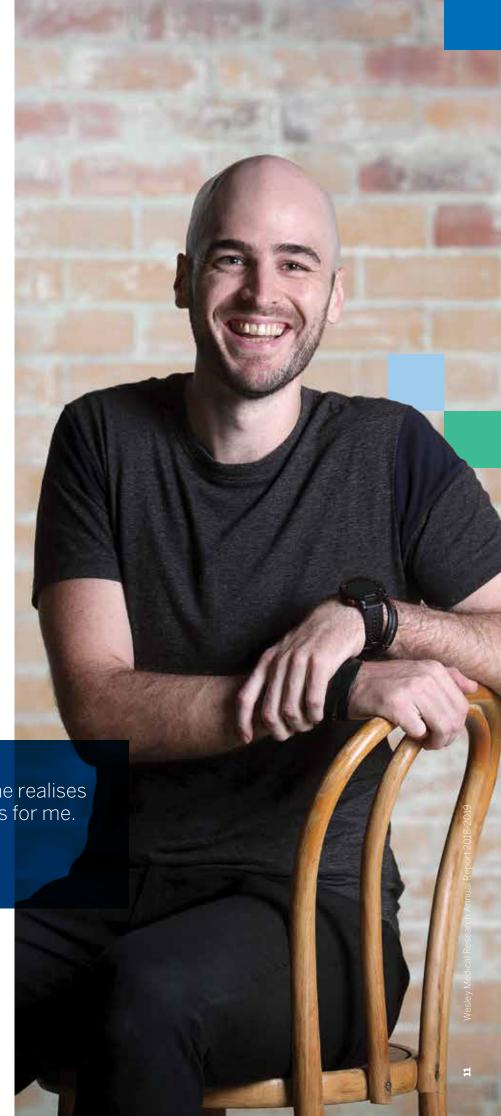

"There is already early evidence to support the successful treatment of Tourette's Syndrome with cannabinoids" said Professor lain McGregor, Academic Director of the Lambert Initiative. "This clinical trial could have a major impact and greatly improve the lives of those living with Tourette's syndrome."

This research was made possible through the generosity of our donors and The Brazil Family Foundation.

44

I don't know if anyone realises what a big deal this is for me. This is life-changing.

Chris

## Our impact on coeliac disease

Thanks to your generous support, Wesley Medical Research is improving the diagnosis and treatment of coeliac disease through a dedicated program of research led by Dr James Daveson

## A faster, simpler way of diagnosing coeliac disease

280 patients participated in a clinical trial at Wesley Medical Research to determine the accuracy of a pin-prick method of testing for coeliac disease. One of these patients was Adelaide, who was nine-years-old at the time.

Adelaide's mum, Louise, couldn't be happier after encouraging her daughter to participate in the clinical trial. After taking a drop of blood and waiting ten minutes, the trial helped give Adelaide a clear result.

"Without this initial test, we wouldn't have done an endoscopy and she would not have been diagnosed so early," Adelaide's mother Louise said.

Adelaide's gastroenterologist acknowledged there was already significant damage to her small bowel from undiagnosed coeliac disease. It will take Adelaide 12-18 months to recover from the internal damage she sustained. "And now she is on her way to better health," finished Louise.

Adelaide is not alone. It is estimated that 350,000 Australians have coeliac disease with the majority remaining undiagnosed. The disease can potentially cause damage to multiple parts of the body, not just the bowel. Left untreated, it can increase a person's risk of

developing lymphoma, infertility and osteoporosis.

"The impact of this technology could lead to a simpler, faster diagnosis—an important step in a timely and accurate diagnosis," said lead researcher, Dr James Daveson.

# Unlocking the secrets to better understanding and treatment of coeliac disease

Wesley Medical Research was thrilled to participate in a Phase 2 clinical trial of a novel vaccine for coeliac disease, Nexvax2®. The trial was designed to demonstrate protection against inadvertent exposure to gluten.

The only intervention currently available for coeliac disease is a strict, lifelong gluten-free diet. While this can reduce intestinal inflammation, even minute amounts of gluten can still trigger an immune reaction.

"This trial was important to establish a potential treatment beyond that of the gluten-free diet" said lead researcher, Dr James Daveson. "Avoiding gluten is challenging and not always effective."

With 40 participants enrolled in the Nexvax2® study, Wesley Medical Research was the highest recruiting clinical trial site globally.

"We were thrilled to be able to offer so many patients the opportunity to participate in this clinical trial," said Senior Research Manager Dr Jennifer Schafer.

"Patients who participate in clinical trials benefit significantly from an enhanced understanding and management of their medical condition. They also help researchers unlock the secrets to the discovery and development of new treatment options in the future," finished Dr Schafer.

This trial was important to establish a potential treatment beyond that of the gluten-free diet.

Dr James Daveson

# Our impact in regional Queensland

Research tackling the growing obesity problem in Emerald, Central Queensland.

34% of Central Queensland adults are obese

Priority areas are obesity and mental health

Building sustainable, healthy habits

Located 900km northwest of Brisbane, Emerald has a population of just over 14.000.

This small community is built upon strong mining and agriculture industries, workforces that traditionally have long hours, higher than average weekly incomes and poorer health outcomes.

Figures show that 34% of Central Queensland adults are obese and coronary heart disease in the region

The resources are focused on building healthy, sustainable habits.

Dr Tamara Street

continues to rise. These alarming statistics led Wesley Medical Research to investigate ways to improve the health of Emerald residents.

Sponsored by Mitsubishi Development Pty Ltd, Adjunct Professor Mary-Louise Fleming (Lead Researcher), Louise Baldwin (Senior Researcher), Dr Tamara Street (Psychologist) and Klaire Somoray (Senior Research Assistant) conducted a six month project in Emerald to co-develop a health promotion report and resource that is regionally relevant, cost effective and innovative.

"Our approach was to engage locally to understand how we could work together to tackle the growing issue," said Dr Tamara Street.

This project combined evidence from national datasets with local insight and knowledge from health professionals, community leaders and service providers working and living in Emerald.

The workshops identified strengths in the local community that are supporting healthy lifestyles and current barriers. The strained health services in the region were

also acknowledged. In the past 12 months, the community also identified mental health as a significant health priority after losing 18 lives to suicide in the region.

"With strong evidence to suggest that regular exercise may alleviate some symptoms of depression, we hope this toolkit could assist in improving mindsets too," said Dr Tamara Street.

The "Hey Emerald, Let's Get Healthy" resource has been developed to assist health promotion planning and implementation. The free resource also includes promotional material suitable for the region.

"The resources are focused on building sustainable healthy habits, instead of 'quick fix' solutions, The report outlines a range of recommendations to help build a happier and healthier Emerald" concluded Dr Street. As well as providing access to a range of health promotion assets, the website provides links to local free or low cost programs already available in the Emerald area.

The workshops identified that the leading health priority areas are obesity and mental health.

## Research Program

Wesley Medical Research is focused on supporting health areas of concern in contemporary society, including; neuroscience, cardiology and cardiac surgery, cancer, surgical and medical innovations, and remote and rural health.

Our researchers are committed to translating scientific results into clinical applications, making more accurate diagnoses, improved treatments and faster recovery pathways a reality for patients.

In addition to our research, we operate a world-class biobank which sources, stores and supplies tissue, blood and data for collaboration with

Australian and international biomedical researchers. This resource is fundamental in understanding and ultimately finding cures for the most debilitating diseases.

## Our Board

The 2018-19 Wesley Medical Research Board, chaired by Mr Peter Allen, consists of skilled and dedicated people who govern the organisation.

MR PETER ALLEN, CHAIRMAN

A Director since 2005, Mr Peter Allen is a former partner in and consultant to national law firm Allens Linklaters and is a Notary Public.

ASSOCIATE PROFESSOR JOHN ALLAN

A/Prof John Allan has been an obstetrician and gynaecologist at The Wesley Hospital since 1984. He is the Chief Academic Medical Officer of UnitingCare Health and Head of the UnitingCare Clinical School.

**MR MICHAEL KRIEG** 

Mr Michael Krieg has over 30 years' experience, commencing his career as a nurse before becoming the General Manager of The Wesley Hospital in 2017. Michael is currently the acting Group Health Executive for UnitingCare Health.

### **MR CHARLIE SARTAIN**

Mr Charlie Sartain joined the Board in 2009. Charlie has more than 30 years of international mining experience. He also a Member of the UQ Senate and Chairman of the Advisory Board of the Sustainable Minerals Institute.

**DR IAN DICKINSON** 

Dr Ian Dickinson has been an orthopaedic surgeon at The Wesley Hospital for over 25 years. He has also served as Chairman of the Queensland Branch of the Australian Orthopaedic Association.

### **MR PETER CROWLEY**

Mr Peter Crowley is a highly experienced business leader and public company director with 15 years of experience leading public companies and 17 years of experience serving on public company boards both in Australia and overseas.

DR CHRISTINE FOLEY

Dr Christine Foley is the Director of Clinical Governance with UnitingCare Health. She worked in senior leadership roles within Catholic health and aged care as a nursing leader and brings her unique perspective.

**DR JAMES AYLWARD**

Mr Richard Lizzio is the Health, Group Executive for UnitingCare Health. Richard has executive responsibility for four UnitingCare Hospitals.

# Managing our resources

#### **FINANCIAL OVERVIEW**

We are proud to be a not-for-profit organisation. The 2018-19 surplus allows us to expand our operations to fulfill our mission to give patients better treatment options and improved quality of life for a range of contemporary diseases and health issues.

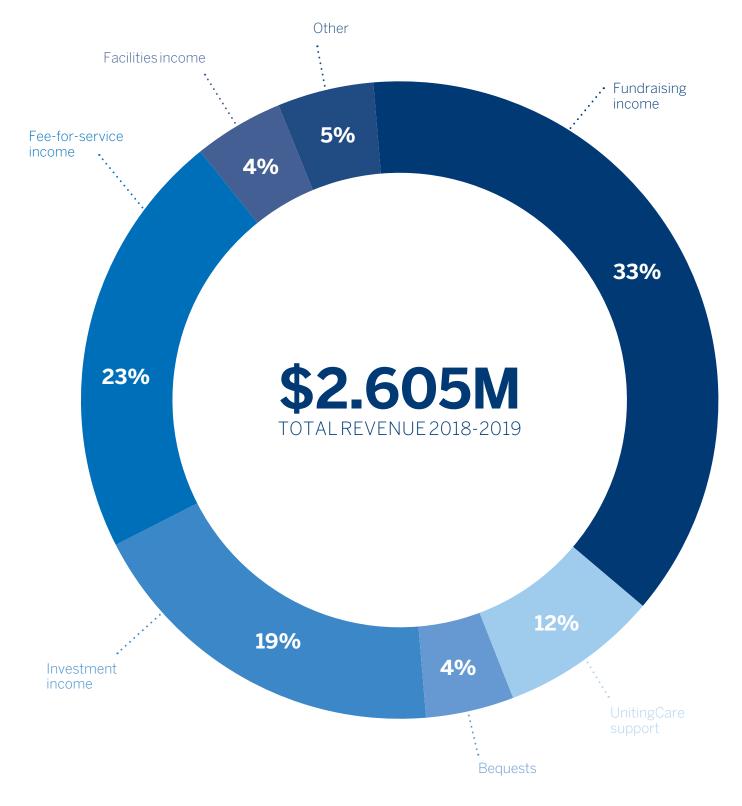

#### **REVENUE**

Total revenue in 2018-19 was \$2.605 million with a significant proportion of revenue coming from fundraising activities and fee-for-service income. The revenue by source is displayed to the right.

#### **FINANCIAL POSITION**

As at 30 June 2019, total equity was \$21.8 million. Our assets include an endowment of \$8 million, prepaid lease of \$8 million and the balance held in term deposits, cash and managed investments to fund future mission-related work. As at 30 June, \$2.54 million is allocated to current research programs.

Revenue	2019 (\$)	2018 (\$)
Fundraising income	855,717	1,545,287
UnitingCare support	305,906	355,995
Bequests	100,000	139,440
Investment income	494,148	558,438
